

Artificial Grass Installation Accessories

unreal
GRASS

Seam Tape

Unreal Grass can provide seam tape for joining sections of artificial grass in both a 150mm wide self-adhesive type for small landscaping applications, and 300mm wide traditional types to be used in conjunction with specialist adhesive. Self-adhesive tape is supplied in a 10m roll. Traditional tapes are sold by the metre, or by the roll (100m – 300m).

Seam Tape Adhesive

Unreal Grass can also supply specialist adhesives designed for joining sections of artificial grass.

ASP1 Silica Sand

Typical artificial grass installations (landscaping in particular) will require silica sand infill. This not only holds the grass in place, but also helps to keep the grass fibres standing up. Different grass types require different quantities of infill (typically 5kg/sqm). Contact Unreal Grass for specific requirements. Sand is supplied in 25kg bags. For specialised sports field applications, rubber granule infill may be a better option – also provided.

Ground Staples

These staples are used to pin the edges of artificial grass where it is impractical or not necessary, to install an edging structure. Staples are available in two lengths, 130mm or 230mm, and are supplied in boxes of 200.

Seam Tape Pins

These plastic pins are used to hold the seam tape in place prior to application of the adhesive. Pins are supplied in packs of 10.
